Exterior LED Lamp Wall Sconce

START FROM HERE

• Make sure **POWER** is **COMPLETELY OFF** at the fuse box
• Have your fixture installed by a qualified licensed electrician
• Prepare everything in a clear area
• Wear gloves at all time during this installation
• Read instructions carefully before you start assembly
• Keep this installation sheet for future reference

Technical Support: 1-855-855-8926

Please Note:
• All Kuzco LED fixtures come with pre-wired LED module(s).
• Unless instructed to do so, please do not touch any part of the LED module(s) as any unnecessary contact with the module could cause permanent damage.
• For dimming, an ELV (Electronic Low Voltage) type of dimmer is required.

1. Remove the fixture from its original packaging. Remove the mounting plate **(1c)** from within the canopy **(2a)** and attach it to the electrical junction box **(1a)**, using the two screws **(1e)** provided in the hardware package.

2. Attach the canopy backplate **(2a)** to the mounting plate **(1c)**, which is attached to the electrical junction box **(1a)** on the wall. First attach all wiring **(1b)** with the provided marrets (white to white "N", black to black "L", ground to ground "G"). Now secure the canopy backplate **(2a)** onto the mounting plate **(1c)** using the two nuts **(2b)**. Thread the two nuts clockwise onto the tow backplate screws **(1d)**. With the canopy backplate seated on the mounting plate, secure the fixture cowl **(2d)** with all four set screws **(2c)** turning clockwise.

3. To prevent moisture from entering the outlet box and causing a short, seal around the top and side perimeter between the fixture and the wall surface with weather resistant caulking **(see illustration 1)**. The space at bottom should be left un-caulked to prevent moisture build-up.
