## READ & SAVE INSTALLATION & OPERATION INSTRUCTIONS

### TOOLS & MATERIALS REQUIRED

- Screwdriver
- Wire Cutters
- Adjustable Wrench
- Wiring Supplies

### CAUTION

Prior to assembly, refer to **ELECTRICAL CONNECTIONS** section. If you do not have electrical wiring experience, refer to a do-it-yourself wiring handbook or have your fixture installed by a qualified licensed electrician.

### GENERAL

1. Be sure to read these instructions and review the diagrams thoroughly before beginning.
2. Electrical connections must be in accordance with local codes, ordinances, or the National Electric Code. If you are unfamiliar with methods of installing electrical wiring, secure the services of a qualified licensed electrician.
3. Before starting the installation, disconnect the power by turning off the circuit breaker or by removing appropriate fuse at fuse box. Turning the power off at the light switch is not sufficient to prevent electrical shock.

### PREPARE THE FIXTURE

**NOTE: First turn off electricity.**

1. If replacing an existing fixture, disconnect and remove old fixture. Expose the supply wiring from outer fixture.
2. If your fixture is supplied with three machine screws, thread the long machine screws into the opposite side of outer fixture. While supporting the fixture, make electrical connections.

### ELECTRICAL CONNECTIONS 120V ~, 60Hz

Connect white wire(s) from fixture to white neutral wire from supply circuit. Connect black wire(s) to black hot wire from supply circuit. Connect green wire to green or bare wire or grounding screw on mounting bracket. In all cases grounding conductor to earth must be used. Use UL/CSA Listed wire connects suitable for the size, type, and number of conductors. No loose strands or loose wires should be present. Secure wire connectors with UL/CSA Listed electrical tape.

### FINAL ASSEMBLY

1. Spread electrical splices so black wires are on one side of outlet box and white wires on the other.
2. Attach assembled unit to outer fixture by using three screws and brass nuts, or the threaded stem with nut provided.
3. Install light bulbs (not provided) and cover assembly. Some models employ a twist off top cap to allow access to bulbs.
4. **CAUTION:** Refer to the relamping label located near lampholder for recommended maximum wattage. Do not exceed recommended wattage.
5. Use weather resistant caulk to seal around top and side perimeter of fixture back plate. Leave bottom uncaulked to allow for condensation evaporation.
6. Restore electrical power.

**Warning: Risk of fire**

Before you do the installation, thoroughly read the instruction sheet. If you do not have sufficient electrical wiring experience, please consult a qualified licensed electrician.

All electrical connections must be in accordance with Local and National electrical code (N.E.C) standard

#### WIRING INSTRUCTION

**WARNING: DISCONNECT POWER AT THE MAIN ELECTRICAL PANEL BEFORE INSTALLATION**

1. Expose the supply wires from the post for wiring connections
2. Connect the ground wire from the post head to the post ground wire using the wire connector
3. Connect the white wire/Ribbed wire from the post head to the supply white wire from the post using the wire connector.
4. Connect the Black wire/smooth wire from the post head to the supply black wire from the post using the wire connector.
5. After all connections are secured, carefully, tuck wires into the post no loose strands, then, slide down the post head over on the post top secured with Allen screws
6. The post head installation is completed, then, do the installation of light fixture properly on the arm of post head

## 501-3 BK

Please observe local building/electrical codes regarding the installation of your post fixture. Please keep in mind your geographic location and the depth that the ground freezes to, when deciding the depth of your installation.
